

NSB 2023 Communication Package (EN)

Background for “Nordic Symposium on Building Physics”

Nordic Symposium on Building Physics (NSB) has been arranged every third year since 1987 and is the largest international conference in building physics. NSB is organized in the Nordic countries but is not limited to cold climates and has now participants from all over the world.

Short text about the conference for newsletter/LinkedIn or other platforms

This summer it is time for the 13th Nordic Symposium on Building Physics and the conference will take place in Aalborg, Denmark, with the opportunity to attend both online and on-site. The theme this year is “Building physics as a key player for the sustainable built environment” and addresses findings and challenges in building a sustainable society with respect to building physics.

The host is BUILD – Department of the Built Environment at Aalborg University and they invite all researchers, engineers and building professionals to join the conference and experience keynotes, workshops and cutting-edge scientific presentations. These focus on heat, air and moisture transfer in buildings, moisture problems in the built environment, building systems, energy performance and indoor environmental quality.

NSB 2023 will be held in English and takes place on 12-14th of June 2023 at Aalborg University.
